

Gambit Financial Solutions

Analyst/Developer .NET

(Sept 2011)

About Gambit

Gambit Financial Solutions (“Gambit” or “the Company”) was originally created as a financial spin-off from HEC – Management School of the University of Liège (HEC-ULg). While keeping strong and on-going links with HEC as the cornerstone of its R&D efforts, Gambit has evolved into a full-fledge commercial company, with a strong international focus, with commercial developments in BE, LU, FR, CH and UK.

The company activities focus on software development and commercialisation, currently its main revenue source, and on outsourcing reporting services. It also provides a number of advisory and consulting services.

Gambit has first developed a software suite – **FolioMaster** – that features two core modules: an asset allocation optimiser which can be used for Fund and/or portfolio optimisation, and a risk management tool. They are already at an advanced stage of development and have been implemented at several clients. It is essentially a back-office optimisation and risk management solution proposed to asset managers, and risk and compliance officers for the asset and fund management industry.

During 2009, the company has developed and started offering its customers an interactive, front-office software suite that supports two main objectives: to identify the investor’s risk profile and to optimize the investor’s portfolio that is consistent with that risk profile. This software suite, called “**WealthExpert**”, features three core components: an investor risk profiler and wealth management planner; a portfolio optimizer, and a compliance and risk management tool.

The application has been developed to comply with existing and emerging European Union (EU) regulations regulating the financial advisory and investment industry. Gambit is proposing the software suite to the independent financial advisors, private, and retail banking segments as well as insurance companies.

In parallel, the company has been approached by a number of fund management industry stakeholders to provide reporting service on fund performance and risk. To meet this growing market opportunity Gambit has developed, as an independent outsourcing third party, a series of advanced analytics that measure actual risk-performance of funds and portfolios. This service – **AssetReporter**– is being offered to the fund management industry and to portfolio managers across the larger financial industry.

Job summary

Gambit Financial Solutions is growing fast and the company has an urgent need to reinforce the IT development team currently composed of five persons.

The range of tasks and responsibilities is wide: code, specifications, quality control, etc. Also, a large amount of evolution possibilities are offered to the candidate regarding his personal skills and capabilities.

The company is evolving in the Microsoft technologies, the team platform is managed by Team Foundation Server 2010 and all the softwares are developed in a multi-tiers architecture (WCF).

Functional skills

- Statistical, mathematical or financial background is a plus;

Technical skills

- *Programming languages and technologies:* C#, .NET Framework 3.5, WCF, Win forms;
- *Development and design environments:* Visual Studio 2010;
- *Databases:* MS SQL Server (Transact-SQL);
- *Source control tools:* Team Foundation Server;
- *Architecture and technical design knowledge:* Microsoft design patterns and best practices.

Personal skills

- Team player and team oriented attitude;
- Good communication skills written and oral;
- Stress resistant;
- Ready to assimilate new technologies and methodologies;

Do you have what it takes?

Education: Bachelor degree;

Experience: no experience required;

Language skills: Fluent in FR, EN and NL is a plus;
